†(D X Augustine and V Sharma are the Guidelines Chairs)

D Oxborough and V Sharma are members of the editorial board of *Echo Research and Practice*. They were not involved in the review or editorial process for this paper, on which they are listed as authors

The authors and journal apologise for errors in the above paper, which appeared in the March 2020 issue of *Echo Research and Practice* (volume 7, pages G1–G18, <https://doi.org/10.1530/ERP-19-0050>).

The errors relate to values given in Table 2 on page G6. The original text gave the Male moderate LVIDd LV dimension as 61–65 mm, the Male mild LVIDs LV dimension as 41–45 mm and the Female mild LVMi LV mass as 98–115 g/m².

This should have stated that the Male moderate LVIDd LV dimension is 62–65 mm, the Male mild LVIDs LV dimension is 42–45 mm and the Female mild LVMi LV mass is 100–115 g/m². The corrected Table 2 is given in full below:

Table 2 Linear left ventricular dimensions and mass.

	Normal	Mild	Moderate	Severe
Males				
LV dimensions				
LVIDd (mm)	37–56	57–61	62–65	>65
LVIDs (mm)	22–41	42–45	46–50	>50
IVSd (mm)	6–12	–	–	–
LVPWd (mm)	6–12	–	–	–
LV mass				
LVMi (g/m ²)	40–110	111–127	128–145	>145
LV mass (g)	72–219	–	–	–
Females				
LV dimension				
LVIDd (mm)	35–51	52–55	56–59	>59
LVIDs (mm)	20–37	38–42	43–46	>46
IVSd (mm)	5–11	–	–	–
LVPWd (mm)	6–12	–	–	–
LV mass				
LVMi (g/m ²)	33–99	100–115	116–131	>131
LV mass (g)	51–173	–	–	–

IVSd, inter-ventricular septal thickness in diastole; LV, mass calculated using the linear method; LVIDd, left ventricular internal diameter in diastole; LVIDs, left ventricular internal diameter in systole; LVMi, left ventricular mass index; LVPWd, left ventricular posterior wall thickness in diastole.
